

## GERRY PARKER

Gerry Parker received his BS, MS, PhD in electrical engineering from the California Institute of Technology, Pasadena, in 1965, 1966, and 1970, respectively. Gerry's thesis advisor was Dr Carver Mead and specialized in semiconductor physics. He held summer jobs with the Air Force Flight Test Center, Hewlett Packard, Fairchild Semiconductor, and Varian Associates. Shortly after its founding, he joined Intel Corporation as a member of the technical staff in Mountain View, California.

Gerry retired from Intel in 2001 and served on Applied Materials, Lattice Semiconductor and FEI Company boards of directors until 2015. He began his Intel career in research and the development of light emitting diodes, then moved to head up reliability and quality for Intel products. In 1977 he was elected vice president and director of technology development. In 1988, Gerry's job expanded to include manufacturing, technology development, purchasing, construction, quality, and planning. From 1998 to 2001 he was Executive Vice President for New Business Group. This involved overseeing multiple internal "startups" primarily focused on the internet and new product opportunities. After his retirement in 2001 he also served on the UC Davis Foundation Board for 6 years as well as on the UC Davis Research Advisory Board.

He currently lives in Winters, California with his wife, Carol. They are now farming walnuts and prunes.
